Homo Sapiens, man, is the most dangerous of all animals. In fact he is credited to have made extinct much of the animal kingdom that survived the Great Flood of ancient times. Man, a predator by nature.

To few saw the great disgrace of the November 2016 election as a failure of female voters of these fifty State, to denounce a self-exposed predictor of women, vote for him in sufficient quantity to have him become #45, President of these United States. Now he extends his preying to the helpless, the poor here,

and throughout the world.

His reward to women, choosing to surround himself with the administration of a predominantly male advisory group, continuing his reign of hostility to any who disapprove him.

Imagine a man who repeatedly refuses to disclose his Income Tax returns, getting away with calling his opponent, "Crooked Hillary", without a hint of evidence, insisting that this is an unproved fact.

Now comes this consequence. Those who refused to negate his claim in the voting booth, now jump with joy when a woman steps forward, claiming she was sexually harassed by ... feel free to enter your choice of that man. We are asked to throw all these bums out of society;

yet, no one goes to jail; just ostracized.

That's not unreasonable. To some extent why should society be asked to pay for the upkeep of perverts in jail, forever, providing them the very comforts many fellow citizens are denied; First Class Medical attention, (Obama Care), comfortable clothing, room and board, and entertainment via TV.

This of course, my biased view of the world that I see.

The real world differs. It is described by others every day in the audio and visual press. Not always the same. To share in what Sister Jane Chittister writes, I rely on the monthly Daily Word, which for the current month,

Do something to change the assault on the environment ... recycle, monitor building sites for dangerous chemicals and materials; don't buy anything made of plastic until the perfect plastic eating microbe that will empty the landfills and oceans of the plastic that is killing them now.
